

BBQTER

Design by Michael René Boesen, AluCluster

The Sailor's Dream

It was a sailor's long-standing dream of being able to barbeque on board his own boat that was the inspiration for the BBQTER®. The dream of not having to land to barbeque, of being able to sit in the cockpit, enjoy the view of nature or the relaxed life in the harbour, whilst the smell of steak, chicken or fish grilling over charcoal wafts around the boat. The sailor's dream has now become reality with the BBQTER®. This unique, original and elegant grill that is simple, efficient and safe and with no awkward cleaning! – The sailor made grill indeed!

Made of aluminium

BBQTER® is made of anodised aluminium profiles giving it a simple and unique look. The well-defined lines of the aluminium profiles makes it almost comparable with a portable laptop computer wherefore it is placed in a special carrying case with room for all the barbequeing tools. The use of aluminium makes it weather-resistant and a lightweight product - features that are required at sea!

BBQTER® - the art of simplicity

BBQTER® adds a new dimension to the joy of sailing. It's quick and easy to assemble and uses an instant (disposable) grill as its heat source. The foil base of the instant grill protects against moisture and avoids the need for awkward cleaning normally associated with barbequing. The result is a relaxed atmosphere on board with delicious, crisp and juicy grilled food. Simple - quick - easy!

Designed for Comfort

BBQTER® is designed for comfort and convenience.

- As portable as a laptop computer
- Quick and easy to assemble
- Multi-functional
- Crisp and juicy grilled food
- Minimal cleaning
- No maintenance
- Very safe
- Weighs only 1.5 kg
- Weather-resistant
- Danish quality and design

- Bon appétit!
